

In cooperation  
with five federal ministries:

BMWi Federal Ministry for Economic Affairs and Energy  
AA Federal Foreign Office  
BMUB Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety  
BMBF Federal Ministry of Education and Research  
BMZ Federal Ministry for Economic Cooperation and Development

## German Water Partnership – The one-stop shop

In April 2008, private and public firms, research institutes and water sector associations and institutions teamed up with the support of federal ministries to found the “German Water Partnership” association. This network acts as a central coordination office for foreign clients and decision makers seeking German expertise in the water sector.

The members of German Water Partnership are dedicated to a set of guiding values and common objectives when providing services to their international clients and partners. German Water Partnership is the one-stop shop for individual solutions and quality services “Made in Germany”.

**Put us to the test. We’ll identify  
the right partners for you –  
directly, precisely and competently!**

Our four  
guiding principles:

Sustainable Use  
Secure Supply  
Efficient Treatment  
Capacity Development

## Gateway to German Water Expertise

Excellence in water technology  
and water management

# German Water Partnership

Your gateway to German excellence – direct, precise and competent!

## A common challenge

One of the core challenges for mankind – today and in the future – is the responsible handling of our water resources. The world's growing population and the steadily increasing agricultural and industrial production clearly call for a highly efficient and sustainable use of our resources.

In addition to the industrialised nations, developing countries and emerging markets particularly need efficient and innovative solutions in every area of water management. German water management helps to address these challenges worldwide.

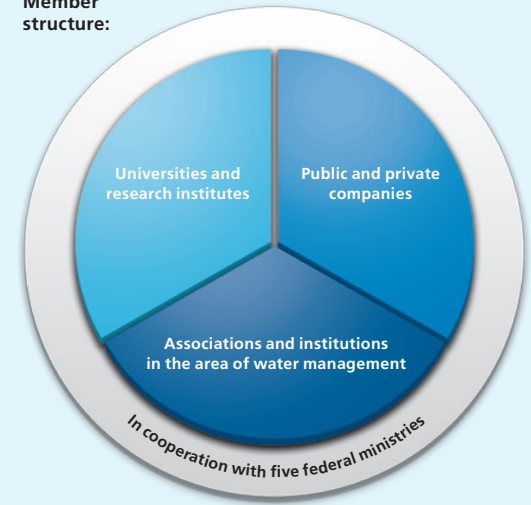

## German excellence

The specific strength of the German water sector is based on its innovative, flexible and value-guided network of players, composed of highly specialised firms and institutions along the entire value chain. German entrepreneurs, engineers, developers and researchers are used to working seamlessly in multidisciplinary consortia – always dedicated to delivering individually adapted, sustainable solutions.

Apart from their state-of-the-art and technical know-how, one particular advantage of working with German players is their strength in designing integrated solutions. Product-integrated environmental protection and Integrated Water Resource Management (IWRM) are not distant goals but a reality in Germany today. Our customers and partners around the world can trust in our long-standing experience and integrated solutions.

Member structure:

### This brand identifies our qualified members.

German Water Partnership is a network of excellence, composed of partners dedicated to a mutual set of values and objectives.

### Guiding values

- › Quality
- › Innovation
- › Flexibility
- › Cooperation
- › Responsibility
- › Clean business

### Common objectives in providing services for the utilisation of water resources

- › Sustainable use
- › Secure supply
- › Efficient treatment
- › Capacity development

As a result, our international clients will benefit from **highest quality engineering services, concerted and value guided action and cutting-edge technology.**
